WILDLIFE CONSERVATIONIST

By Isabella
WHY I CHOSE WILDLIFE CONSERVATIONIST

I chose wildlife conservationist for this project because I thought it would be kind of fun to spend all my time hanging out with, studying, and protecting animals, as well as plants. I think it would also be fun to find ways to bring back different species of animals and plants. It would also be fun to think of ways to stop pollution and overhunting and global warming, and other things that harm wildlife. Another reason I chose wildlife conservationist is because my little sister loves animals and I’ve wasted too much of my life watching animal planet with her. That’s basically all the reasons why I chose wildlife conservationist.
A wildlife conservationist is someone who's job is to protect the environment. They normally do things like study animals and plants, help endangered species, and basically just figure out how to save the Earth. The average salary of a wildlife conservationist is about $61,110. To become a wildlife conservationist, the education you need is to have gone to school and you need a bachelor’s degree, but for some special things you need a master’s degree. So again what is a wildlife conservationist? Someone who protects the environment.
A wildlife conservationist is a scientist because they study animals and plants and the environment. The earth, which wildlife conservationists study/protect, is definitely a part of science. So in the very short conclusion, wildlife conservationists are scientists because they work with the Earth, which is definitely science.
I learned a few things when I researched about wildlife conservationists. One thing I learned about wildlife conservationists is that
