The Great Blue Hole

Naia S
The Great Blue Hole

Is located in Belize
It’s a large underwater sinkhole
The hole is circular in shape, over 984 ft. across and 410 ft. deep.
It is the world’s largest natural formation of its kind.
formation took place 153,000; 66,000; 60,000; and 15,000 years ago
The hole was originally a cave during the last glacial period, a time when sea levels were much lower.
As the sea level rose the cave flooded and then collapsed creating a vertical cave, or a sinkhole.
The site is popular for scuba diving to look at geological formations and organisms.
Prime time to spot Whale Sharks is April to June
In 1971, Famous explorer Jacques Cousteau made it one of the top 10 best diving places in the world.
I would like to go to The Great Blue Hole and scuba dive
